Let's summarize the absolute rot at the core of Google's AI ecosystem right now (HAI-DEF)

1. **Google's Official Policy:** Explicitly forbids clinical use and states that MedGemma/MedASR is *not* an approved medical device.
2. **Google's Engineers:** Publicly congratulate developers, validate 'real clinical workflows,' and invite uncertified medical apps into the official Showcase.
3. **The Developer Community's Reaction:** As one forum user bluntly put it: *'People don't really care, they want to vibe code their app, get paid, and move on with their lives.'*

So, let's connect the dots:
Google's own policy says *'do not risk patient safety'*. Google's engineers say *'congratulations on using it in a live clinic!'*. And the developers openly admit *'we don't give a damn about consequences, we just want our money'*.

This is a complete regulatory collapse. You are enabling and encouraging uncertified, non-compliant medical AI tools to be rushed into real clinics, while everyone involved washes their hands of any patient safety liability.

It's sickening, it's hypocritical, and it is a massive disaster waiting to happen. The paper trail is locked, the archives are permanent, and the whole world can see what you are doing.
